

Methods

1. System Overview

Pipeline Architecture

Data Sources and APIs

Software Stack

Ethical and Data Statement

2. Disease and Gene Characterization

Orphanet Integration

OMIM Cross-Reference

ClinicalTrials.gov Active Trial Filtering

Disease Severity and Morbidity Flagging

3. Structural Homology and Surrogate Database

Surrogate Database Curation

Sequence Homology

Domain Architecture Similarity

Structural Similarity

Composite Structural Score

4. Vector Compatibility and Delivery

AAV Packaging Limit

Cargo Sizing and Oversized Gene Handling

Serotype Selection

Tissue Tropism Scoring

Freedom-to-Operate Flag

5. Expression, Promoter, and Regulatory Matching

GTEx Tissue Expression Analysis

Promoter Selection

Promoter Precedence Scoring

Regulatory Element Mining

6. Immunogenicity, Codon Optimization, and Therapeutic Window

MHC-I Epitope Prediction

Self-Similarity Correction

Codon Adaptation Index

Therapeutic Window Assessment

7. Multi-Parameter Scoring Engine

Scoring Dimensions

Normalization

Weighted Composite Formula

Hard Gates

Confidence Tiers
